Intelligent Dairy Solutions
IDS Nurture

IDS Nurture is a data processing and analysis tool that presents actionable insights to the dairy farmer through a user-friendly interface. Data is collected through the IDS product range; robust wireless sensors - IDS i-QUBE, IDS Teat Pre & Post Robots and IDS Vision. The goal is to provide a complete solution to help optimise productivity and well-being of your cows and contribute to a sustainable future of your business.

IDS Nurture provides a viewing and analysis platform for individual and herd data, allowing insights into behaviour patterns and arising health issues. The system turns sensor and robot data into real-time, relevant alerts and information to help you manage your herd.
The captured data can be viewed on the user's personal dashboard, via a parlour interface, desktop, tablet or smartphone. IDS Nurture is compatible with a number of herd management systems, providing access to valuable information on a single format.
IDS Nurture allows real time visualisation of your robots, so you can monitor your herds performance.
